7. Influencing Human Behavior

a. Influencing human behavior is a most complex subject and very difficult to describe and evaluate in terms of accomplishment,

cost, and potential benefit to clandestine operations. The whole field includes medical, physiological and psychological aspects and ..... while there has been much speculation on the subject very little of a positive nature is known about the extent to which human behavior can be predicted, directed and controlled, Chemical Division has larged a program having some specific goals in view and has now reached a point--in progress where a review of the progrem should be made to determine if the effort should be continued and what course it should take. " b. Because of the searcity of positive incitedge, much time and money is being spent on fairly basic research and extensive testing and experimentation. This type of activity cannot be measured in terms of concrete results nor can dollar values be applied. It requires an aggraisal of the objectives of the program from the goint of view of the Control of the Contro operational benefits to be derived, weighed against the allocation of Rangower and funds operational problems the program is designed to neet. One of the rajor. problems is that of improved interrogation techniques. Many different methods are used to break down an individual's resistance to interregation - -- but there is always doubt about the accuracy and reliability of information obtained by the classical methods of pressure, duress or torture. The use of drugs or psychochemicals in this respect is not new. So-called --"truth serums" have been used, sometimes successfully but more often not. The approach being taken by Chemical Division is to use psychochemicals to create within the individual a mental and emotional situation which will release him from the restraint of self-control and induce him to reveal information willingly under adroit manipulation.

FREE الد استناده و الدور المواهدي

-Related to the improvement of offensive techniques is the development of defensive measures against opposition Missiedge gained in the former will lead to counterinterrogations. والراز المنصور المحاربة المتاريخ والمرا تقريف يثي ما ما for the protection of Agency personnel and information con-cerning Agency activities. This is another objective of the progress. while it is replicated the treatment of a The potential use of psychochemicals in political action well recognized, although it has not been explored as the expected. Chemical Division includes it as an The state of the s objective of its program to be prepared to support or make such operawith the same of the properties of epithes and the Year Year in work women. .. tions possible. - Non-chemical methods of accomplishing political action operations are also included in the program. Tesser objectives but perhaps of equal sementance are

and practical find to case officers in handling agents. the street of the second property of the g. Some concrete results have been achieved. Six specific . He administrate who we are the professional terrories from products have been developed and are available for operational use. Three อาเมือง เล่าได้ เรื่องได้ การ การ การที่ เมือง โดยเดาเมนอนตัว และ เพื่อเลย โดยเกิด เกาะกา of them, P1, C1, and C9, are discrediting and disabling materials which The service of the se can be administered unwittingly and permit the exercise of a measure of CANAGO AND PROPERTY OF A SECOND CONTRACTOR control over the actions of the subject. These have been used in six different operations on a total of 33 subjects. The other products are

Ko, a knockout material used to facilitate ucconsciousness; K3-analcohol extender which produces a degree of inebriation-out-of-proportion-\_\_\_\_\_to the amount of alcohol consumed and; A2; which is a stimulant similar \_\_\_\_ - to Benzedrine in its effect but without its undesirable after-effects. ... A manual has been produced which analyzes methods used by Communist - - security forces in the arrest; interrogation and indoctrination of "enemies of the state." Two other manuals of lesser distinction have been published. One describes methods of administering drugs or chemicalmaterials surrentitiously and misdirecting attention-of-a-subjects The ....other is devoted to and methods of influencing free choice. Other studies are still in process-waich, it is anticipated. will produce more profound knowledge on the subject of influencing human h. At the present time, there are a substantial number of active projects concerned with substantive research in the behavioral field. our recurrent Singe many of them include other activities, it is not practical to try com-.... to segregate those contracts which have direct application or to apportion those with multiple objectives. The total extent of the effort, however, can be fairly accurately described. i. Extensive research is being conducted by two organizations in which the Agency has substantial interests. One is the a research foundation with headquarters in Washington. It is supported in part by the Agency and is used principally as a funding mechanism to finance research projects. In addition to its use as a cover facility, it provides useful information in several areas of medical research and

process but one which must be accomplished carefully and thoroughly..... There are no short-cuts or substitutes which can be applied. Because of -the unconventional use of the materials involved, CD has had added difficulty in obtaining expert services and facilities to conduct tests and experiments. - Some of the activities are considered to be professionally methics and in some instances border on the illegal. These difficulties have not been entirely surmounted but good progress is being made. Another problem is raised by the lack of professional knowledge of lysergic soil --- the basic substance with which CD is concerned. Very little research has been done by the radical profession and CD is breaking new ground. in its efforts to develop this raterial for operational use. -- 1. Preliminary tests and experiments are generally conducted on anirels .- For this purpose, CD has engaged the services and facilities of such institutions as /The National Institute of Mental Health conducts tests on its colory to study the effects of P and knockout material and has provided or ation of operational value. Human experimentation is more difficult to accomplish. The best results have been obtained from mental institutions such as Parcotics Addiction Hospital, Lexington, Ky., An arrangement is in process with the SECTION : which is expected to produce valuable results. Even with all the data gathered from these institutions there remains a considerable area of doubt. These tests and experiments are conducted under controlled conditions and the results may be quite different from those obtained in the operational use of the
